How to handle... **UNIVERSAL WASTE**

**TRAIN**
Employees who handle universal waste require training, and the training should be documented.

**CONTAINERIZE AND KEEP CLOSED**
All waste mercury devices must be kept in closed, non-metal containers that will not leak or spill under normal conditions.

**LABEL**
All containers must be correctly labeled as “Used Mercury-Containing Equipment” or “Waste Mercury-Containing Equipment.”

**DATE**
Containers must be labeled with the date when the first mercury-containing equipment was placed in the container.

**REMOVE**
Mercury-containing equipment must be removed from the facility for recycling within one year of the date on the container.

If not managed as universal waste, used mercury-containing equipment must be managed as hazardous waste.

Mercury-containing equipment that can be managed as universal waste includes: thermostats, barometers, mercury switches, old silver-mercury thermometers and certain medical equipment.

Go to dnr.wi.gov, search "universal waste" and find DNR publication WA-I004 Management of Mercury Containing Equipment for more information.

Broken mercury devices should be placed in closed, leak-proof, non-metal containers and handled as hazardous waste.
